

The screenshot shows a Microsoft Visual Studio Code (VS Code) interface. The title bar displays "lab10". The left sidebar has icons for Explorer, Search, and Problems, with the Explorer icon being active. The Explorer view shows a file tree with "OPEN EDITORS" containing "server.py" and a folder "LAB10" containing "about.html", "contact.html", and "index.html". The main editor area shows the code for "server.py".

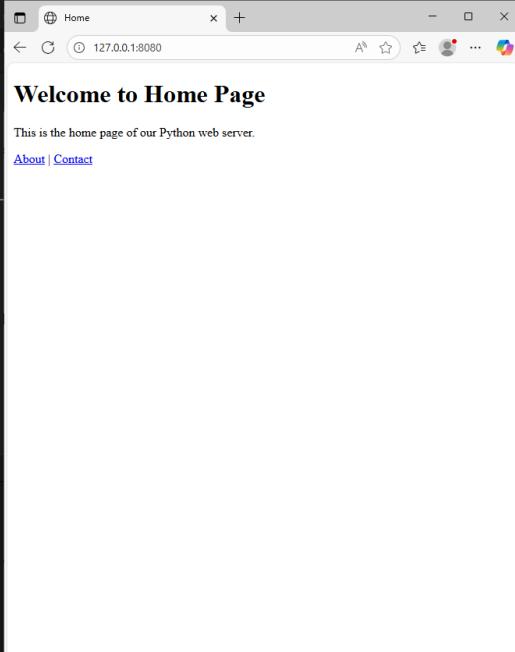

```
server.py > MyHTTPServer > do_GET
1 from http.server import HTTPServer, BaseHTTPRequestHandler
2 import os
3
4 HOST = "127.0.0.1"
5 PORT = 8080
6
7 class MyHTTPServer(BaseHTTPRequestHandler):
8
9     def do_GET(self):
10
11         if self.path == "/":
12             filename = "index.html"
13         else:
14             filename = self.path[1:]
15
16
17         if os.path.exists(filename):
18             self.send_response(200)
19             self.send_header("Content-type", "text/html")
20             self.end_headers()
21
22             with open(filename, "rb") as file:
23                 self.wfile.write(file.read())
24         else:
25             self.send_response(404)
26             self.send_header("Content-type", "text/html")
27             self.end_headers()
28             self.wfile.write(b"<h1>404 - Page Not Found</h1>")
29
30
31 server = HTTPServer((HOST, PORT), MyHTTPServer)
32 print(f"Server running at http://[{HOST}]:{PORT}")
33 server.serve_forever()
```
